EDUCATION

Scripps Institution of Oceanography, University of California, San Diego
PhD in Physical Oceanography. GPA: 4.0.
Dissertation title:
The global meridional overturning circulation in an idealized two-basin model
Advisor: Professor Paola Cessi
2011–2018

Oxford University
MPhys, Second Class Upper Division
2007–2011

RESEARCH EXPERIENCE

Texas A&M University
ACES fellow & Visiting Assistant Professor
August 2021–present

Lamont Doherty Earth Observatory
Associate Research Scientist
July 2020–July 2021
Postdoctoral Research Fellow
June 2018–June 2020

Scripps Institiution of Oceanography
Graduate Research Assistant
July 2012 - May 2018

JOURNAL ARTICLES

C. S. Jones and R. P. Abernathey. Modeling tracer distributions in the modern and LGM ocean: circulation change vs. isopycnal mixing. *J.Phys. Oceanogr.* doi: 10.1175/JPO-D-20-0204.1

C. S. Jones and R. P. Abernathey. Isopycnal mixing controls deep ocean ventilation (2019). *Geophysical Research Letters*, 46 doi: 10.1029/2019GL085208

C. S. Jones and P. Cessi. Components of salt transport in the upper branch of the meridional overturning circulation (2018). *J.Phys. Oceanogr.*, 48, 2445–2456 doi: 10.1175/JPO-D-18-0005.1

C. S. Jones and P. Cessi. Size matters: another reason why the Atlantic is saltier than the Pacific (2017), *J.Phys. Oceanogr.*, 47, 2843–2859 doi: 10.1175/JPO-D-17-0075.1

P. Cessi and **C. S. Jones**. Warm-route versus cold-route interbasin exchange in the meridional overturning circulation (2017), *J.Phys. Oceanogr.*, 47,1981–1997 doi: 10.1175/JPO-D-16-0249.1

C. S. Jones and P. Cessi. Interbasin transport of the meridional overturning circulation (2016). *J. Phys. Oceanogr.*, 46, 1157–1169, doi: 10.1175/JPO-D-15-0197.1

C. S. Jones, C. Cenedese, E. P. Chassignet, P. F. Linden and B. R. Sutherland. Gravity current propagation up a valley (2015), *J. Fluid Mech.*, 762, 417–434, doi: 10.1017/jfm.2014.627

Invited Talks

Understanding Subpolar North Atlantic Heat Content Variability in the CESM Large Ensemble. NASA GISS, January 2020.

Understanding ocean heat and tracer transport, both today and at the Last Glacial Maximum. University of Washington, November 2020.

The global meridional overturning circulation in an idealized two-basin model. Stony Brook University, January 2019.

The global meridional overturning circulation in an idealized two-basin model. Yale University, September 2018.

Teaching & Mentoring Experience

Lamont-Doherty Earth Observatory
Undergraduate Summer Intern Mentor, Summer-Fall 2019

I mentored an undergraduate summer intern in a project that examined heat transport in the ECCOv4 data-assimilating ocean model.

Columbia University
Guest Lecturer

Techno-Critical Assemblies, Fall 2020
I prepared a lecture about the intersection of ocean and climate science with technology, with a focus on the challenges of big data, and the role of cloud computing.

GU4925 Introduction to Physical Oceanography, Fall 2018, repeated Fall 2019
I prepared two lectures about analytical models of the circulation and stratification of the global ocean. I gave these lectures to a mixture of undergraduate and graduate students and created notes to appear online.

Fellowships

Lamont Postdoctoral Fellowship
Two-year postdoctoral fellowship
June 2018 - June 2020

Geophysical Fluid Dynamics Fellowship
Summer Program at Woods Hole Oceanographic Institution
June - August 2013

Technical Skills

Scientific computer programming in Matlab, python and FORTRAN. Experienced with git, github, cloud computing, and with python packages for handling large geoscience datasets, including xarray, xgcm and xmitgcm. Familiar with the MIT general circulation model (including the adjoint model and state estimation capabilities). Proficient with LaTeX, UNIX and Microsoft Office.

Service & Outreach

Co-creator, *Pyclub: Dive into python with oceanographers* A short course for high-schoolers, pilot Spring 2021

Volunteer, Lamont Doherty Earth Observatory Open House, October 2018 & 2019

Volunteer, SUBMERGE Marine Science Festival, September 2019

Student Member, Atmospheric and Oceanic Fluid Dynamics Committee. American Meteorological Society [February 2014 - February 2018]

Reviewer: Journal of Physical Oceanography, Journal of Climate, Geophysical Research Letters, Journal of Advances in Modeling Earth Systems, Proceedings of the National Academy of Sciences

Further Talks

Understanding ocean heat and tracer transport, today and at the Last Glacial Maximum, Texas A&M, January 2021

Overturning and mixing control ocean tracer distributions, with impacts for future climate. GFDL, June 2020.

Isopycnal Mixing Controls Deep Ocean Tracer Distributions. Ocean Sciences 2020.

Demystifying ocean tracer distributions: data science tools and applications to the Earth's climate. Texas A&M, January 2020.

Isopycnal Mixing and Ventilation of the Deep Ocean. Conference on Atmospheric and Oceanic Fluid Dynamics 2019.

The global meridional overturning circulation in an idealized two-basin model. Lamont-Doherty Earth Observatory. February 2019.

The effects of basin geometry on transport, stratification and salinity in the meridional overturning circulation. Physical Oceanography Dissertation Symposium (PODS), October 2018.

Size matters: another reason why the Atlantic is saltier than the Pacific. Conference on Atmospheric and Oceanic Fluid Dynamics 2017.
